

Project Plan

Team: 261-03b, Django Unchained

Brief problem statement

We will implement a "Tool sharing" software that will allow neighborhoods to organize their tools and put them up for rental. The system will keep track of the items borrowed along with their condition, rental time, and owner. The design will have a super admin that only developers and Investiny Corp employees can access. Admins, who can invite people into a neighborhood rental group, and Members who can join a neighborhood, rent tools, and post comments.
